# USED GRAPHICS

USED GRAPHICS

You can generate a log of used resources by including the following line in your document style:

```
\usemodule[res-trace]
```

You can add comment to a resource by *preceding* it with:

```
\startresourcecomment  
  Whatever message you want to communicate.  
\stopresourcecomment
```

Currently only the resources included with `\externalfigure` are kept track of. At the end of a `CONTEXT` run, you will find a file with the suffix `.rlg` in your path. This file can be processed using this interface.
