About This File

About This File

This file contains several fonts. There are outline fonts and bitmap fonts, text fonts and math fonts. The fonts use different encoding schemes. One can toggle between text or math examples and font tables, which look like the ones found in The TEXbook.

There are four font sets to choose from. Each one has roman (`\rm`), sans serif (`\ss`) and teletype (`\tt`) alternatives. The different styles are arranged in some systematic way. The normal style is called TypeFace (`\tf`) and the other ones BoldFace (`\bf`), Slanted (`\sl`), Italic (`\it`), BoldSlanted (`\bs`), BoldItalic (`\bi`) and SmallCaps (`\sc`). The bigger alternatives (`\tfa`, `\slb`, etc.) are not shown. Caligraphic (`\cg`), HandWritten (`\hw`), FaxFont (`\ff`) and BlackBoard (`\bb`) are not included in this file.

The math fonts are arranged more or less the way Plain TEX does. There is Math Roman (`\fam0`), which is not shown here, Math Italic (`\fam1`), which is not always italic, Math Symbol (`\fam2`) and Math Extended (`\fam3`). When available, there are some more families shown: Math Symbol A, Math Symbol B and/or Math Symbol C.

Some fonts are duplicates of others. This is due to the fact that in CONTEXT we have default settings for fonts that are not present in some font families, for instance some sans serif alternatives in Computer Modern Roman. The Computer Modern fonts are sort of preloaded at the outermost level and the local ones override them only when present.

This file is generated by pdfTEX. Most fonts are included as vector (outline) font, and a few are 600 dots per inch bitmaps. Fonts are partially embedded.

I hope this file will be of use to all that want to test their version of Acrobat Reader, especially with the math fonts. The fonts shown are supported in CONTEXT in the way shown. Although the font–system provides a lot more than is shown here, this subset will do. All fonts shown are 10 points, except for the Extended Math Fonts, which are 8 points.

Hans Hagen, October 21, 1998

Concrete Euler | Teletype Italic | cmitt10

Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large–scale user; the designer should also write the first user manual.

The seperation of any of these four components would have hurt TEX significantly. If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or percieved why they were important.

But a system cannot be succesful if it is too strongly influenced by a single person. Once the initial design is complete and fairly robust, the real test begins as people with many different viewpoints undertake their own experiments.

Donald E. Knuth

Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large–scale user; the designer should also write the first user manual.

The seperation of any of these four components would have hurt TEX significantly. If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or percieved why they were important.

But a system cannot be succesful if it is too strongly influenced by a single person. Once the initial design is complete and fairly robust, the real test begins as people with many different viewpoints undertake their own experiments.

Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large-scale user; the designer should also write the first user manual.

The seperation of any of these four components would have hurt TEX significantly. If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or percieved why they were important.

But a system cannot be succesful if it is too strongly influenced by a single person. Once the initial design is complete and fairly robust, the real test begins as people with many different viewpoints undertake their own experiments.

The folowing math formula is taken from the TEXbook by D.E. Knuth. It's exercise 19.13 on page 192.

$$\begin{aligned}\left(\int_{-\infty}^{\infty} e^{-x^2}\,dx\right)^2 &= \int_{-\infty}^{\infty}\int_{-\infty}^{\infty} e^{-(x^2+y^2)}\,dx\,dy\\ &= \int_0^{2\pi}\int_0^{\infty} e^{-r^2} r\,dr\,d\theta\\ &= \int_0^{2\pi}\left(-\frac{e^{-r^2}}{2}\Big|_{r=0}^{r=\infty}\right)d\theta\\ &= \pi.\end{aligned}$$

Concrete Euler | Roman Math Symbol C | eufm10

We thrive in information–thick worlds because of our marvelous and everyday capacity to select, edit, single out, structure, highlight, group, pair, merge, harmonize, synthesize, focus, organize, condense, reduce, boil down, choose, categorize, catalog, classify, list, abstract, scan, look into, idealize, isolate, discriminate, distinguish, screen, pigeonhole, pick over, sort, integrate, blend, inspect, filter, lump, skip, smooth, chunk, avarage, approximate, cluster, aggregate, outline, summarize, itemize, review, dip into, flip through, browse, glance into, leaf through, skim, refine, enumerate, glean, synopsize, winnow the wheat from the chaff and seperate the sheep from the goats.

Edward R. Tufte

Concrete Euler Sans Serif Typeface cmss10

Thus, I came to the conclusion that the designer of a new system must not only be the implementer and first large–scale user; the designer should also write the first user manual.

The seperation of any of these four components would have hurt TEX significantly. If I had not participated fully in all these activities, literally hundreds of improvements would never have been made, because I would never have thought of them or percieved why they were important.

But a system cannot be succesful if it is too strongly influenced by a single person. Once the initial design is complete and fairly robust, the real test begins as people with many different viewpoints undertake their own experiments.
